ASSIGNMENT 1 - IMPLEMENTATION OF THE "SEARCH SHELL" HYBRID APP

NOOR MASHAQI

02

GIVEN THAT REACT NATIVE IS A BRIDGED FRAMEWORK, WHY IS THIS SPECIFIC IMPLEMENTATION CATEGORIZED AS A HYBRID/SHELL ARCHITECTURE RATHER THAN A BRIDGED/NATIVE UI ARCHITECTURE?

This implementation is considered Hybrid/Shell architecture because the React Native app only works as a container that displays a web page through WebView. The interface and functionality come from the web content (Google), not from native UI components built using the React Native bridge.
